You follow the following steps in the order I list them:

1) Scan the QR code shown in the photo I sent with your mobile phone.

2) After the successful scanning of the code, a new screen will appear on the screen of your mobile phone where at the bottom it will be written "Go to the website".

3) Then a new message will appear titled "Open with" and within it the command "Package Installer". You select this command by clicking on it.

4) A new window titled "ICH & CC" now appears and within it the command "Do you want to install this application?". You choose "INSTALL".

5) The standard security check of the application follows. Once this is completed successfully, select the command at the bottom of the "Open" screen. You are now ready to browse the app I have created.

Finally, and the most important part of the application for me is to answer the questions, specifically the button in the About → Evaluate me! section which I have written exclusively for product review.
